css-classes-and-attributes

NAME

css-classes-and-attributes - CSS classes and attributes

DESCRIPTION

See Utility classes.

SECTIONS

01 Classes for your content
02 Attributes
03 Classes of documents
04 Named pages

SEE ALSO

front-matter, javascript-hooks, command-line

CSS classes and attributes

Classes for your content

Class	Effect
`page-break` / `page-break-after`	Starts a new page after the element
`page-break-before`	Starts a new page before the element
`avoid-page-break`	Keeps the element on a single page when possible
`mkdocs-exporter-ignore`	Removes the element from PDF documents
`mkdocs-exporter-only`	Removes the element from the website (it is only in PDF documents)

See Utility classes.

Attributes

Attribute	Effect
`data-mkdocs-exporter-teleport="<selector>"`	Moves the element into the element the CSS selector matches, in documents and in the website's pages (see Moving elements)
`data-teleport="<selector>"`	Deprecated, replaced by `data-mkdocs-exporter-teleport`
`data-decompose="true"`	Deprecated, replaced by the `mkdocs-exporter-only` class

Classes of documents

The exporter gives these classes to the elements it adds to documents, to style them:

Class	Element
`mkdocs-exporter-front-cover`, `mkdocs-exporter-back-cover`	The cover pages, wrapping the content of their template
`mkdocs-exporter-title`	The page's title, inserted when its content has no first-level heading (`title`)
`mkdocs-exporter-toc`	A table of contents, wrapping its template: `mkdocs-exporter-toc-title`, `mkdocs-exporter-toc-entries` (lists), `mkdocs-exporter-toc-entry` and `mkdocs-exporter-toc-level-N` (entries), `mkdocs-exporter-toc-label` and `mkdocs-exporter-toc-page` (their title and page number)
`mkdocs-exporter-part`	In books, each page of the website (identified by `mkdocs-exporter-part-N`, from `0`)
`mkdocs-exporter-blank`	In books, the blank pages inserted by `start: odd`

Named pages

The exporter prints some elements on named pages, which `@page` rules can style:

Page	Pages
`mkdocs-exporter-cover`	Back covers, when headers or footers are configured
`mkdocs-exporter-front-cover`	In books, front covers (`@page :first` rules of your stylesheets and covers apply to them)
`mkdocs-exporter-toc`	In books, the table of contents
`mkdocs-exporter-blank`	In books, blank pages

In the document of a page, its front cover is its first page (`@page :first`).

COLOPHON

This document is a page of https://adrienbrignon.github.io/mkdocs-exporter/, printed by MkDocs Exporter 7.0.0 with Chromium.
